

[056] ABSTRACT

[057] A shade device configured to provide comfort, entertainment, or convenience to the people positioned adjacent to them is disclosed. In one embodiment, the shade device has an audiovisual media and a power source that powers an audiovisual media is disclosed. The audiovisual media may be positioned under a covering of the shade device to provide entertainment to the user. In other embodiments, the shade device includes a liquid source and a sprayer. The sprayer is configured to obtain liquid from the liquid source and spray the liquid to cool the temperature surrounding the user. The shade device may further include sprayer switch and a switch actuator that allow the user to control the amount of liquid sprayed by the sprayer. In certain embodiments, the shade device may include a container for the user to store food or beverage. The container may be cooled by the liquid from the same liquid source where the sprayer obtains the liquid to spray.
